DynaView - iMatrix to be honored at Long Island Software Awards (LISA)

Bay Shore, New York, April 16, 2007 – IPVideo Corporation announced today that they will be honored as product winners at LISTnet's (Long Island Software and Technology Network) Long Island Software Awards (LISA) in recognition of their dedication to the development of technology on Long Island.

At a ceremony to be held at the Garden City Hotel on May 1, 2007, Steve Sleicher, IPVideo's vice president, will be on hand to accept the award on behalf of DynaView – iMatrix.

iMatrix is an event-driven video display system providing strategic rules-based control of video monitors and video walls across the network. Tactical on-the-fly command intervention maximizes the productivity and efficiency of the surveillance professional. iMatrix, in combination with DynaView's Network Video Recorders, dynamically changes which camera's video is displayed on each specific console based on the detection of motion, a triggered alarm event, an analytical examination, or a manual override. iMatrix replaces traditional analog matrix switches by utilizing the IP network to transmit software commands that push video to specific displays rather than using hardware switches and dedicated coaxial cabling to each camera.

About IPVideo Corporation

IPVideo Corporation is a leading manufacturer of quality turnkey IP Video Surveillance products. IPVideo's products enable business, government and educational institutions to expand, integrate and automate their video monitoring and security operations. Our solutions have helped these sectors leverage the combined power of LAN, WAN and Internet technologies to transform outdated analog processes into highly efficient digital systems providing actionable knowledge for security applications.
